## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Watchorn or Ishii or Hebant (US 1650103,3565190,5516237) or Canadian document (CA 967770) or British document (GB 2355750) or Japanese documents (7-42469, 08082186, 2001-3363) in view of Frisk et al. (US 4908,101).  
  
Watchorn, Ishii, Hebant (US 1650103,3565190,5516237), Canadian document (CA 967770), British document (GB 2355750) and Japanese documents (7-42469, 08082186, 2001-3363) all disclose a casing and auger wherein they are rotated in opposite directions. However, they all are silent about the auger's helix having increased surface roughness in the feed direction. Frisk et al. teaches an auger's helix having increased surface roughness in the feed direction ((25), see Figs. 5-6C). It would have been considered obvious to one of ordinary skill in the art to modify either Watchorn or Ishii or Hebant (US 1650103,3565190,5516237) or Canadian document (CA 967770) or British document (GB 2355750) or Japanese documents (7-42469, 08082186, 2001-3363) to include increased surface roughness in the feed direction of their respective auger's helix as taught by Frisk et al. since such an arrangement facilitates the augering process.
